Claim Rejections - 35 USC § 112

Claim 13 recites the limitation "the bladder". There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3 and 5-12 are rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Pat. No. 1,423,590 to Zimmerman.

In reference to claim 1, Zimmerman discloses a fastener comprising:

a housing 2 sized and adapted to mate with a fastening element 4; and

a latch 10 positioned relative to the housing to retain the fastening element within
the housing.

Regarding claim 2, further including a flange 1 and wherein the housing and the latch are both connected to the flange.

Regarding claim 3, wherein the flange is configured so that it can be connected to a sheet of material (col. lines 78-82).

Regarding claim 5, wherein the housing comprises a side wall 11 and a retaining lip (12,13).

Application/Control Number: 09/862,858

Art Unit: 3673

Regarding claim 6, wherein the retaining lip (12,13) defines a downwardly extending notch to accommodate a fastening element attachment mechanism.

Regarding claim 7, wherein the side wall 11 comprises a semi-circular section.

Regarding claim 8, wherein the housing is formed from a sheet metal that is inherently flexible (col. 2 lines 83-92).

Regarding claim 9, wherein the latch is flexible (col. 2 lines 83-92).

Regarding claim 10, wherein the latch defines a flange generally parallel to a base of the housing and projecting towards the interior of the housing (fig. 11).

Regarding claim wherein the latch defines a protrusion having a portion corresponding to the shape of the fastening element (fig. 11).

Regarding claim 12, wherein the fastener is formed in a sheet of material (col. 2 lines 77-82).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claim 4 is rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Pat. No. Zimmerman in view of U.S. Pat. No. 5,855,033 to Frissen.

Zimmerman discloses all of the Applicant's claimed limitations except for the sheet of material comprising a thermoplastic and the flange and the sheet of material are heat sealed together. Frissen discloses a fastener assembly (29,31) with a sheet of

Application/Control Number: 09/862,858

Art Unit: 3673

material comprising a thermoplastic that is heat sealed together (col. 2 lines 9-20). It would have been obvious to employ a thermoplastic assembly wherein the components are heat sealed together in order to provide an inflatable beach item.

Claims 13-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Pat. No. 5,855,033 to Frissen in view of U.S. Pat. No. Zimmerman.

In reference to claim 13, Frissen discloses a fastener assembly, comprising: a fastening element 29,

a housing 31 connected to a bladder (23,25) and sized to mate with the fastening element. Frissen fails to disclose a latch positioned relative to the housing to retain the fastening element within the housing. Zimmerman discloses a fastener assembly having a latch 10 positioned relative to a housing 9 to retain a fastening element 4. It would have been obvious to one having ordinary skill in the art at the time of the invention to employ a fastening assembly having a latch positioned relative to the housing in order to prevent the components from becoming unintentionally disconnected.

Regarding claim 14, wherein the fastening element is flexible (col. 2 lines 83-92).

Regarding claim 15, wherein the housing is flexible (col. 2 lines 83-92).

In reference to claim 16, Frissen discloses a device comprising:

a substantially impermeable fluid bladder (23,25);

a housing 31 sized and adapted to mate with a fastening element 29. Frissen fails to disclose a latch positioned relative to the housing to retain the fastening element within the housing. Zimmerman discloses a fastener assembly having a latch 10

positioned relative to a housing 9 to retain a fastening element 4. It would have been obvious to one having ordinary skill in the art at the time of the invention to employ a fastening assembly having a latch positioned relative to the housing in order to prevent the components from becoming unintentionally disconnected.

Regarding claim 17, further comprising a flange 1 wherein the housing 9 and the latch 11 are connected to the flange (Zimmerman).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Fredrick C Conley whose telephone number is 308-7468. The examiner can normally be reached on m-th m-fri.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Heather Shackelford can be reached on 308-2978. The fax phone numbers for the organization where this application or proceeding is assigned are 305-7687 for regular communications and 3057687 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 308-2168.
